

Partnering to Deliver Value for Process OEMs

“Rockwell Automation and Endress+Hauser has provided US Bottlers the tools needed to provide high accuracy filling that covers all of our customer base. With the “plug and play” ease of use with the Dosimass and Dosimag meters in conjunction with ControlLogix we can quickly and effectively design a new filling system or field upgrade an older machine. The result is that we can provide a machine that has a lower operating cost due to the reduced maintenance and captured savings from repeatable accurate filling.”

– John Owen
Director of Engineering
US Bottlers Machinery Company

World Class Solutions for Process OEMs

No matter the industry or the application, together we help OEMs achieve:

- Reduced quotation cost and improved order hit rates by using widely accepted controls and instrumentation
- Reduced integration costs throughout engineering, commissioning and start-up
- Reduced installation through quick-disconnect wiring designs
- Optimized process equipment that always delivers product quality and consistency
- An information enabled Process Control System that allows your equipment to
 - Meet regulatory demands
 - Offer remote access for maintenance and troubleshooting
 - Capture valuable process improvement data
 - Provide a potential secondary revenue stream from predictive maintenance through intelligent devices

We provide Process OEMs world-wide, a fully functional, flexible, scalable and affordable Process Control System with tested interoperability and value-add differentiation.

With preferred integration between the broad spectrum of Endress+Hauser instruments, which include level, flow, pressure, temperature and analytical, and the Rockwell Automation PlantPAX™ Process Control System, you are able to reduce risk, reduce integration costs and protect investment with assured interoperability. Both companies believe open systems and standardized interfaces bring our customers maximum benefits.

Your success drives us. Our global alliance draws from the core competencies of both companies to produce scaleable engineered solutions that include measurement, automation, services and software applications.

Endress+Hauser is trusted by more than 100,000 customers to make their processes safe, efficient and environmentally friendly. We offer a range of measurement products, including level, flow, pressure, temperature, analytical and complete engineered solutions designed to help customers acquire, transmit, control and record process information needed to manage operations in a safe, reliable and profitable manner.

Examples Include:

HART Simplification - All non-fieldbus instrumentation (4-20ma) from Endress+Hauser ships with fully functional HART capabilities as standard. Rockwell Automation and Endress+Hauser have created integration documents that provide all the information needed to connect the Endress+Hauser instrumentation to a wide range of Rockwell Automation distributed and chassis based HART analog input modules.

Beyond the integration documents, we have also worked together to create faceplates that allow direct access to the information contained with the Endress+Hauser instruments, from Rockwell Automation's HMI (FactoryTalk View®), as well as from both companies Asset Management Software Packages – Endress+Hauser FieldCare and FactoryTalk AssetCentre.

Reduced Installation Time and Cost Initiatives -

Both Rockwell Automation and Endress+Hauser are working together to provide quick-disconnect technology that goes from the I/O card, all the way to the HART enabled instrumentation. This will eliminate wiring errors, speed up installation & commissioning time, as well as provide information needed to manage assets in a cost effective manner.

Open Standards Support - Both Rockwell Automation and Endress+Hauser support open standards such as FDT / DTM, HART, Foundation Fieldbus and others. This means the OEM will never be under the control of a vendor's proprietary control or instrumentation.

Rockwell Automation, Inc. (NYSE: ROK) is a leading global provider of industrial automation power, control and information solutions that help manufacturers achieve a competitive advantage in their businesses. The company brings together leading global brands in industrial automation that include Allen-Bradley® controls and services and Rockwell Software® factory management software. Headquartered in Milwaukee, Wis., the company employs about 20,000 people serving customers in more than 80 countries.
