The Food Safety Modernization Act (FSMA) has greatly increased the regulatory burden placed on U.S. food and beverage companies in an effort to shift food safety from reactive to preventative. We understand the demands maintaining compliance places on the food industry. These demands have forced your organization to expand your testing, documentation and auditing procedures in order to comply. Failure to comply could mean severe consequences, such as mandatory recalls, enhanced inspection, penalties from federal and state agencies, and expensive litigations.

Are you struggling to comply to the FDA's Verification Procedures rule?

Is your organization struggling to comply with the verification procedures and activities as outlined in the Food Safety Plan such as calibrating your facility's process monitoring instruments and verification instruments, maintaining records of calibration and written procedures? For many, execution of the verification procedures section as mentioned in the Food Safety Modernization Act is complex and time consuming. With the new FDA rule, this has forced your facility to invest in training, education, enhanced systems and processes in order to implement new safety regulations while continuing to provide the support necessary for your operations.

Peace of mind – Endress+Hauser can help you comply

Focus on what you do best – production – and allow the experts in calibration to help you comply with the verification procedures as required by the FDA Preventative Controls Rule for Human Food. As an ISO 17025 accredited calibration provider, we can easily help you stay compliant and ensure you are prepared for an audit. Endress+Hauser has the tools and expertise needed to support your complete calibration program as outlined in [21CFR117.165](#).

Ensure your FSMA program efficiency

Endress+Hauser can also help once your FSMA program is in place. Our unparalleled on-site calibration services enhanced by verification capabilities lead to optimized process run time. And, now with Heartbeat Technology, we can even offer traceable verification on-demand locally or remotely to satisfy all regulatory requirements.
