

Your inquiry concerning "RoHS Directive" for Endress+Hauser

Dear _____,

Thank you for your inquiry regarding Endress+Hauser compliance with the European Union Restriction of Hazardous Substances (RoHS) Directive 2011/65/EU, which restricts the use of lead (Pb), mercury, cadmium, hexavalent chromium and two bromine-containing flame retardants: PBB (polybrominated biphenyls) and PBDE (polybrominated diphenyl ethers) in electrical and electronic products. Endress+Hauser is committed to compliance with all relevant laws and regulations, including the RoHS Directive.

In reply to your inquiry, pursuant to Article 4, section 3 of the RoHS Directive, all Endress+Hauser's instruments that belong to the category of industrial monitoring and control instruments, are today subject to the RoHS Directive from July 2017 on. For the majority of Endress+Hauser's instruments the implementation of RoHS requirements in the design, production and supply chain is accomplished.

However a few instruments are subject of an exemption to the RoHS Directive. They are components of the category of 'large-scale stationary industrial tools' or 'large-scale fixed installation' (Article 2, section 4 (d) and (e)), which are excluded from the directive.

For those products which meet the RoHS requirements today an EU Declaration of Conformity could be provided on request.

We trust that this letter will answer your questions. Should you require any further information, please contact your local Endress+Hauser Sales Office (see www.endress.com for contact information).

With kind regards

Endress+Hauser

Information for internal: EU Declaration of Conformity are available via MMM
