Representative

Learn how Plant Asset Management can help you to increase the return on your investment.

Target group Anyone who is involved in planning processes and the operation of a production plant.

Course content Commissioning, maintenance and repair is costly. Therefore, a clever selection of the right technology or strategy can result in lower investment or operational costs and higher availability, easier maintenance, hence a faster return on investment.

There are different technologies, tools and strategies available. This course brings a fundamental understanding of possible strategies for life cycle management of plant assets and available tools that can help run a process safely, reliably and be more cost effective.

Key benefits Participants will understand what Plant Asset Management means, what can be the scope and how it can be used to improve a process. They will understand the differences, advantages and disadvantages of analog and digital data transmission in terms of configuration and maintenance. After this course it will be clear which strategy can be used for improving processes. When can you save money with new technologies like digital communication and when should you stay with simple devices and data acquisition?

In terms of Endress+Hauser devices and tools, the participant gets an overview about remote configuration, condition monitoring and available life cycle management tools in general.
